LANGUAGES

French — Native language

English — Professional, technical

TECHNICAL SKILLS

Security operations

SOC, SIEM, log analysis, incident response (IR), triage, threat detection, patch management, hardening, vulnerability management

Network security

pfSense, firewall, VLAN, segmentation, DHCP, VPN, routing, IDS/IPS

Application security

Secure password storage, data encryption, HTTPS, secure web development best practices

Cloud & IAM

Microsoft Azure, Entra ID (Azure AD), Office 365, SharePoint, identity and access management

Systems & tools

Windows 11, macOS, Linux, PowerShell, Bash, VirtualBox, Active Directory

Programming

Python (OOP, automation), PHP (secure API), SQL, HTML, CSS, applied mathematics

STRENGTHS

- Clear, structured communication, even on technical topics
- Autonomy and responsiveness when facing a technical problem
- Teamwork on complex projects
- Fast learner of new concepts

INTERESTS

Travel

Discovering new cultures, adaptability and working in a multicultural environment.

Football

Regular practice: team spirit, handling pressure and fast decision-making (skills transferable to the SOC).

Car mechanics

Lifelong passion: technical curiosity, analytical rigour and diagnostic logic (reflexes applied to incident resolution).

Tech watch

Regular reading of CERT-FR and ANSSI, tracking CVEs and attack techniques.

CERTIFICATIONS

Cybersecurity MOOC — ANSSI

French National Cybersecurity Agency

Data Protection MOOC — CNIL

French Data Protection Authority

Sajid Marzouqy

Cybersecurity Engineering Student — Junior SOC Analyst

Seeking an apprenticeship · Schedule: 1 week school / 1 week company

Incoming cybersecurity engineering student at CNAM (Dicasi track), admitted for the September 2026 intake, I am looking for an apprenticeship. With early hands-on SOC experience, I am specializing in security monitoring, threat detection and incident response. Rigorous and curious, I want to actively contribute to protecting your information system while consolidating my operational expertise.

EDUCATION

● **Cybersecurity Engineering Degree — CNAM Dicasi**

Upcoming — September 2026 intake (admitted) · **Paris**

Engineering programme focused on network architecture, cybersecurity project management, information system security and development. In-depth study of cloud security, applied cryptography, risk management and incident response.

● **BUT in Networks & Telecommunications**

2024 — 2026 · **Sorbonne Paris Nord University** · Villetaneuse

Training in network infrastructure, systems administration, cybersecurity and monitoring, applied through numerous real-world projects (SAE).

● **French High School Diploma (Baccalauréat) — with honours**

2021 — 2024 · **Andrée Boulloche High School** · Livry-Gargan

Majors in Mathematics, Physics-Chemistry and English — solid scientific foundation and rigorous working method.

PROFESSIONAL EXPERIENCE

● **Cybersecurity & Network Analyst — SOC**

Internship · 3 months · **Systelium FZE LLC** · Paris, France

- **SOC monitoring & traffic analysis** — real-time monitoring of network flows and security logs; detection and triage of risk events (SIEM alerts, traffic anomalies) to reduce MTTD.
- **Incident & vulnerability management** — triage, investigation, escalation and documentation of incidents; tracking the vulnerability lifecycle through to effective remediation.
- **Patch management** — updating applications and network equipment (updates, patches, hardening) to reduce the attack surface.
- **Governance & documentation** — writing and reviewing SOC procedures and playbooks.

● **AI Trainer — NLP, mathematics & code review**

Since December 2024 · **OUTLIER** · United States (remote)

- Evaluating and categorizing AI-generated responses in French, English, code (Python, JavaScript...) and mathematical reasoning, checking their accuracy and compliance.
- Reviewing code and mathematical proofs to validate the syntax, logic and consistency of technical responses.
- Improving model performance by identifying errors and inconsistencies.

TECHNICAL PROJECTS

● **Secure web registration platform**

Personal project · In production · **AppSec / DevSecOps / Applied cryptography**

- **Database & PHP API security** — parameterized queries (SQL injection prevention), least-privilege principle, OWASP Top 10 protection (XSS, CSRF, IDOR).
- **Applied cryptography** — strong hashing (bcrypt / Argon2), encryption of data at rest, HTTPS/TLS.
- **Measurable impact** — 400+ registrations processed with no security incident; revenue generated in the tens of thousands of euros.

● **Secure network project — JurisNova law firm**

April — July 2025 · **Academic** · Paris

- Designed a network architecture segmented into 4 VLANs (LAN, Web DMZ, DB DMZ, guest Wi-Fi) to isolate sensitive zones.
- Deployed the pfSense firewall, DHCP server, inter-VLAN filtering rules and hosted GLPI in the DB DMZ.

● **Cybersecurity Simulation — Cyberattack Project**

October 2024 — January 2025 · **Academic** · Paris

- Set up a virtualized attack/defense lab to simulate real-world cyberattack scenarios.
- Detected vulnerabilities (open ports, exposed services, weak configurations) and applied countermeasures: segmentation, hardening and logging.
