Personal vehicle

LANGUAGES

French — Native language

English — Professional, technical

TECHNICAL SKILLS

Security operations

SOC, SIEM, log analysis, incident response (IR), triage, threat detection, patch management, hardening, vulnerability management

Network security

pfSense, firewall, VLAN, segmentation, DHCP, VPN, routing, IDS/IPS

Application security

OWASP Top 10, XSS, CSRF, SQL injection, IDOR, cryptography, bcrypt, Argon2, HTTPS/TLS, DevSecOps

Cloud & IAM

Microsoft Azure, Entra ID (Azure AD), Office 365, SharePoint, identity and access management

Systems & tools

Windows 11, macOS, Linux, PowerShell, Bash, VirtualBox, Active Directory

Programming

Python (OOP, automation), PHP (secure API), SQL, HTML, CSS, applied mathematics

STRENGTHS

- Clear, structured communication, even on technical topics
- Autonomy and responsiveness when facing a technical problem
- Teamwork on complex projects
- Fast learning of new concepts

INTERESTS

Travel

Discovering new cultures, adaptability and working in a multicultural environment.

Football

Regular practice: team spirit, pressure management and fast decision-making (qualities transferable to SOC work).

Car mechanics

A childhood passion: technical curiosity, analytical rigor and diagnostic logic (reflexes applied to incident resolution).

Technology watch

Regular reading of CERT-FR and ANSSI, CVE tracking and attack-technique monitoring.

CERTIFICATIONS

ANSSI Cybersecurity MOOC

French National Cybersecurity Agency

CNIL Data Protection MOOC

French Data Protection Authority

Sajid Marzouqy

Cybersecurity Engineering Student — Junior SOC Analyst

Cybersecurity engineering student at CNAM (Dicasi program), I am looking for an apprenticeship on a 1-week-company / 1-week-school rhythm. Building on a first SOC experience, I am specializing in security monitoring, threat detection and incident response. Rigorous and curious, I want to actively contribute to protecting your information system while strengthening my operational expertise.

EDUCATION

Cybersecurity Engineering Degree — CNAM Dicasi

September 2026 — Ongoing · [Paris](#)

Engineering program focused on network architecture, cybersecurity project management, information-system security and software development. In-depth study of cloud security, applied cryptography, risk management and incident response.

BUT Networks and Telecommunications

2024 — 2026 · [University Sorbonne Paris Nord](#) · Villetaneuse

Training in network infrastructures, systems administration, cybersecurity and monitoring, applied through numerous real-world projects (SAE).

General Baccalaureate — with Honors

2021 — 2024 · [Lycée Andrée Boulloche](#) · Livry-Gargan

Mathematics, Physics-Chemistry and English specializations — solid scientific foundation and rigorous work method.

PROFESSIONAL EXPERIENCE

Cybersecurity & Network Analyst — SOC

Internship · 3 months · [Systelium FZE LLC](#) · Paris, France

- **SOC monitoring & traffic analysis** — real-time monitoring of network flows and security logs; detection and qualification of risky events (SIEM alerts, traffic anomalies) to reduce MTTD.
- **Incident & vulnerability management** — triage, investigation, escalation and documentation of incidents; tracking the vulnerability lifecycle through to effective remediation.
- **Patch management** — updating applications and network equipment (updates, patches, hardening) to reduce the attack surface.
- **Governance & documentation** — writing and reviewing SOC procedures and playbooks.

AI Trainer — NLP, Mathematics & Code Review

Since December 2024 · [OUTLIER](#) · United States (remote)

- Evaluating and categorizing AI-generated responses in French, English, code (Python, JavaScript...) and mathematical reasoning, checking their accuracy and compliance.
- Reviewing code and mathematical proofs to validate syntax, logic and the consistency of technical answers.
- Improving model performance by identifying errors and inconsistencies.

TECHNICAL PROJECTS

Secure Web Registration Platform

Personal project · In production · [AppSec](#) / [DevSecOps](#) / [Applied cryptography](#)

- **Database & PHP API hardening** — parameterized queries (SQL-injection prevention), least-privilege principle, OWASP Top 10 protection (XSS, CSRF, IDOR).
- **Applied cryptography** — strong hashing (bcrypt / Argon2), encryption at rest, HTTPS/TLS.
- **Measurable impact** — 400+ registrations processed with no security incident; revenue of several tens of thousands of euros generated.

Secured Network Project — JurisNova Law Firm

April — July 2025 · [Academic](#) · Paris

- Designed a network architecture segmented into 4 VLANs (LAN, Web DMZ, DB DMZ, guest Wi-Fi) to isolate sensitive zones.
- Deployed a pfSense firewall, a DHCP server, inter-VLAN filtering rules and hosted GLPI in the DB DMZ.

Cybersecurity Simulation — Cyberattack Project

October 2024 — January 2025 · [Academic](#) · Paris

- Built a virtualized attack/defense lab to simulate cyberattack scenarios under realistic conditions.
- Detected vulnerabilities (open ports, exposed services, weak configurations) and applied countermeasures: segmentation, hardening and logging.
